

Practical Case Study

- 1- Create a folder that you will use to save your web pages : for example C:/InventoryWebPages
- 2- Open any Text Editor (For example Notepad (Accessories→Notepad))
- 3- Type all required information on this file
- 4- Save the file as type “all files” with the file name inventorymanagement.html in your folder
- 5- To test the functionality of your page, open a Web browser (Netscape Navigator or Internet Explorer...). Browse to the folder and open the file in your browser.

Follow the same steps as seen in chapter 9 to create this web page.

For that, you have to consider :

- HTML Tags
- HTML Text Body Formatting Tags
- Alignment and Font control

- Links to other web sites and web pages
- Images
- Frames
- Lists
- Forms
